

# ABDULRAHMAN BIN RUSHUD

## Senior Information Technology Student

As an IT student, I consider myself a team player. I prefer learning and searching for information and learning on my own before relying on others because I believe that if a person tries and works hard to look for information, the information will become more solid than if he took it from others. I love to finish my work as quickly as possible. I am interested in designing and developing web interfaces, as well as developing mobile applications, and every day I see an opportunity to learn something new.
